## [1] "per_word"
## Warning: Closing open result set, pending rows
## [1] "youtube_entries"
## [1] "word"          "thumbs_up"    "thumbs_down"
## [1] "title"         "channel_title" "category_id"   "tags"
## [5] "views"         "likes"         "dislikes"      "comment_total"
```

Here, we select words we would qualify as moderately popular based on their number of thumbs up received on Urban Dictionary.

```
## Warning in result_fetch(res@ptr, n = n): Don't need to call dbFetch() for
## statements, only for queries
```

And here, we pick out videos we'd consider to be moderately popular on YouTube. The goal here is to compare the words in the descriptions/tags of the videos with the actual words from Urban Dictionary to see how they relate, if at all.

```
##      word thumbs_up
## 1 homie      4501
## 2      7      4503
## 3 gunt       4507
## 4 vegan     4507
## 5 diva      4514
## 6 swag      4521
```

This is the creation of a data frame from the Urban Dictionary data we just extracted. It can now be used to compare and subset within R.

```
##                                     title
## 1 Yosuke Ideguchi AMAZING Goal Japan vs Australia 2-0 (2018 FIFA World Cup Qualifiers)
## 2 Yosuke Ideguchi AMAZING Goal Japan vs Australia 2-0 (2018 FIFA World Cup Qualifiers)
## 3 Yosuke Ideguchi AMAZING Goal Japan vs Australia 2-0 (2018 FIFA World Cup Qualifiers)
## 4                                     Pretty in Pink- You Can't Make it Happen
## 5                                     Pretty in Pink- You Can't Make it Happen
## 6                                     Pretty in Pink- You Can't Make it Happen
##
## 1
## 2
